

Sales Performance Analysis

Sample Sales Dataset · Jan 2005 – May 2005 · 2,823 order lines across 300 orders

Total Sales (valid orders)

\$9.77M

Valid Orders

300

Avg Order Value

\$32,553

Units Sold

96,432

This report summarizes the cleaning process and key findings from the sales dataset. Figures exclude the 74 line items marked **Cancelled** or **Disputed** (\$266.7K), which are retained in the cleaned file but flagged rather than deleted.

Data Cleaning Summary

Issue	Action Taken
ORDERDATE stored as text	Parsed to proper date type (2,823 rows)
TERRITORY blank for USA/Canada (1,074 rows)	Filled with 'NA' (North America) to align with EMEA/APAC/Japan codes
Optional address fields blank (State, Postal Code, Address Line 2)	Address Line 2 blanked conditionally — not applicable outside US/Canada/Australia/Japan
SALES vs. Qty x Price mismatch (1,303 rows, 46% of total)	Kept SALES as source of truth; added CALC_SALES/SALES_VARIANCE audit columns (likely order-level rounding)
Cancelled / Disputed orders (74 rows, 2.6%, \$266.7K)	Flagged via IS_VALID_ORDER column; excluded from headline KPIs
2005 data covers only Jan-May	Flagged as partial year — excluded from full-year comparisons
Exact duplicate rows	None found (0 rows)

Sales Trends

Sales grew steadily year over year and show strong, repeating seasonality: **November** is the peak month in every year of the dataset (holiday buying), contributing 21.7% of total valid sales despite being 1 of 12 months.

Sales by Product Line

Classic Cars is the leading product line at \$3.83M (39% of total sales), nearly double the second-place Vintage Cars (\$1.86M). Trains is the smallest line at just 2.3% of sales.

Sales by Region

EMEA is the largest territory at \$4.77M (49% of sales), roughly two-thirds larger than North America (\$3.81M). APAC and Japan together make up just 12% of sales, indicating room for expansion in Asia-Pacific.

Top 10 Products

Sales by Deal Size

Medium deals drive the majority of revenue (\$5.93M, 61%). Large deals are rare (only 5.5% of orders) but disproportionately valuable — worth watching as a growth lever.

Recommendations

1. Plan inventory and staffing around the November peak

November sales are consistently 2-3x a typical month across all three years. Lock in supplier capacity and staffing by Q3 each year rather than reacting once the surge starts.

2. Protect and extend the Classic Cars franchise

Classic Cars drives 39% of revenue on its own. Prioritize this line for new SKUs, marketing spend, and stock availability, while auditing why Trains (2.3% of sales) underperforms — discontinue, bundle, or reposition it.

3. Invest in APAC and Japan growth

These two territories combine for just 12% of sales versus EMEA's 49%. Given comparable product demand elsewhere, this points to a go-to-market gap worth a dedicated regional sales push.

4. Investigate the discount/pricing process

46% of order lines show SALES different from Quantity x Price by more than \$1. Confirm whether this reflects an approved discounting workflow or a data-entry/order-system inconsistency — either way, documenting the rule will make future revenue reporting more reliable.

5. Convert more Medium deals into Large deals

Large deals are only 5.5% of orders but average far higher value. Identify what separates a Large deal (bulk quantity, customer tier, product mix) and test upsell or bundling tactics on top Medium-deal customers to shift the mix.

Note: All KPIs exclude Cancelled/Disputed orders. 2005 figures cover Jan-May only and are not directly comparable to full-year 2003/2004 totals. Full detail, formulas, and the complete cleaned dataset are available in the companion Excel workbook.
